PERFORMANCE RESULTS

- *"After replacing the wires we found an astounding 15.3 HP increase and an additional 17.3 FT-LB of torque improvement over stock."*
Chevy High Performance Magazine, October 2005 (2003 5.7L Silverado)
- *"0" Ohm resistance and no RFI/EMI radio noise."*
Car Craft Magazine, June 2005 (1993 350 Chevy)

An Industry First!

FORGET EVERYTHING YOU'VE EVER HEARD ABOUT PLUG WIRE!!!

- "0" Ohm Resistance
- Solid Core Wire
- OBD-II Safe
- 8mm – 500° Silicone Jacket/boots
- Stainless Spark Plug Terminals

NO OTHER WIRE MANUFACTURER CAN MAKE THESE CLAIMS!

Our Hardcore Series wire set features an unheard of near "0" ohms* resistance per foot. Our patent pending technology has less RFI/EMI interference than an O.E. set and allows full coil power to reach the spark plug. Numerous Dyno* tests on a variety of vehicles have shown an increase of as much as 15 HP and 17 lbs. of torque at the rear wheels (Dyno data available upon request). Easy installation, custom tailored fit, and OBD-II safe. Available for most domestic/import/truck applications.

SMOKE & MIRRORS

We have all heard about the magic pill in the gas tank that will get you 50 MPG, the secret formulas and silver bullets that increase horsepower and gas mileage. Experience tells us that those outrageous claims are bogus and mostly smoke and mirrors. However, every so often something comes along that's real and this is one those times. There are no smoke and mirrors here! "0" Ohm Solid Core Ignition wire that is OBD-II safe and can be used on any computer controlled vehicle resulting in easier starts, better pick-up, increased rear wheel horsepower, increased torque, and/or fuel economy.

PERFORMANCE IGNITION WIRE FACTS

Did you know that most racers replace their ignition wire at least once a year because of core deterioration?

- **Our "0" OHM Stainless Solid Core wire may be the last set you will ever have to buy, and has a limited lifetime warranty.**

Did you know that a typical performance wire set with 50 ohms per foot rating does not supply the same spark intensity to each cylinder? That's because a 2' wire has 100 ohms of resistance and a 4' wire has 200 ohms. The longer the wire, the more resistance and less power reaches the spark plug.

- **Our "0" Ohm Solid Core wire supplies full coil power and spark intensity in equal amount to all cylinders regardless of wire length. It's like blue printing the ignition spark to each cylinder!**

Did you know that the performance wire industry does not offer any upgrades for coil on plug ignition?

- **We have applied the same "0" ohm technology to coil on plug ignition and offer connector kits for most performance coil on plug vehicles.**

A NEW Answer to Frequent Coil Replacements

The Coil-on-Plug ignition on the 4.6L, and 5.4L Ford engines have many problems. The majority of coil replacements has to do with the design of the connector boots and springs. Boots are prone to burn-through and arching. Poor fitting springs sometimes weld themselves onto the plug or coil making removal difficult without stretching the springs completely out of shape when changing the spark plugs or removing the coil.

Our industry first coil-on-plug connector sets virtually eliminate these kinds of problems and will improve performance and fuel economy.

Patent Pending

NEW GM HI-PERFORMANCE MAF SENSORS

WITH ADJUSTABLE CALIBRATION

Finally, a replacement Mass Air Flow Sensor that has HIGHER RELIABILITY than the original equipment unit. It has been PATENTED by Micro-Tech Automotive. This unit has up to 30% HIGHER AIR FLOW RATE than the original equipment unit and you don't have to tear out the screens or grind down any parts inside! Our unit is the only unit available that features ADJUSTABLE CALIBRATION. If you have a highly modified engine, then this is what you have been waiting for! High lift cams, big valves and intake system changes that increase the volumetric efficiency of your engine create the need for an Air Flow Sensor that can be tuned to meet the needs that your combination requires. Up to 15 R.W. horsepower and 15# torque are possible depending on individual engine modifications and final calibration.
