## GMS SWAY BAR END LINKS INSTALLATION INSTRUCTIONS

In order to install your new GMS sway bar end links it is ideal to raise the car safely off the ground. You would want the car high enough to work under it while maintaining the weight of the car on the wheels and tires. Positioning the car on a drive up lift or ramps would work best. This will make setting the links much easier.

Step 1: Remove the factory sway bar links from both sides of the car.

Step 2: Assemble both end links making sure to leave the jam nut loose.

Step 3: Install each link using the lock nuts provided. Do not fully tighten yet.

Step 4: Position the end links as pictured below. Each rod end should face away from each other.

Step 5: You can now begin to tighten the lock nuts. When positioning the links it is important to make sure that there is no rubbing or binding. You should be able to move bar freely through it's full range of motion.

Step 6: It is recommended to set the sway bar links at neutral. This means that both bars are at equal length. This will allow the sway bar to react the same whether your turning left or right. For more advanced enthusiasts these links allow you to set sway bar pre-load to match your driving characteristics or style. This can be achieved by adjusting the length of the rods. For best results find a friend that is close to the weight of whoever drives the vehicle the most. Have them sit in the driver's seat while making any adjustments. This will simulate real world conditions and result in the best handling.

Congratulations you are now finished!
